ABOUT ME

I have worked on AI, machine learning, computer vision, and automation projects, along with hands-on experience in web scraping and full-stack web development. I enjoy working with new tools and technologies, actively learning through practical experience. Over time, I've developed a strong interest in Artificial Intelligence, Machine Learning, and Data Science, and continuously working to enhance my skills in these areas.

EDUCATION

FAST NUCES LAHORE - BACHELORS IN COMPUTER SCIENCE (BSCS)
GOVERNMENT COLLEGE UNIVERSITY (GCU) - FSC PRE ENGINEERING

CGPA : 3.38
Grade : A+

2022 - 2026
2020 - 2022

WORK EXPERIENCE

DevNuts - Software Developer

August - November 2025

Built automation bots and web scrapers using Playwright, Selenium, and BeautifulSoup, automating manual workflows for clients. Developed JavaScript-based Chrome extensions to streamline and automate repetitive browser tasks. Also contributed to a full-stack web application using React, Flask, and MongoDB, working on features and API integration.

FAST NUCES Lahore - Lab Demonstrator

January - May 2025

Worked as Lab Demonstrator for the course Database Systems. Assisted students in understanding SQL concepts, database design, and query optimization through hands-on lab sessions

PROJECTS

Final Year Project - VisionGuard AI (Smart Surveillance System) - AI-based surveillance system that uses deep learning models for computer vision and audio analysis to perform real-time anomaly detection. Trained and tested models to detect fights, human falls, gunshots, abnormal sounds, and unusual crowd activity, generating alerts during suspicious events. Built a React-based frontend dashboard for live monitoring and alerts, with a backend developed using FastAPI to handle model inference and system integration.

Real Estate Market Intelligence using Machine Learning - Developed an end-to-end ML pipeline on the Ames Housing dataset (2,900+ records, 80+ features), including data cleaning, feature engineering, and feature selection and applied multiple classification and clustering techniques to derive predictive and segmentation insights.

Life Expectancy Prediction (WHO Dataset) - Worked on a regression problem using World Health Organization (WHO) survey data to predict average life expectancy of different regions. Performed data cleaning, handling missing values, encoding categorical features, exploratory data analysis, and feature selection, followed by training and tuning regression models. Evaluated model performance using Mean Absolute Error (MAE) and applied cross-validation and hyperparameter tuning to avoid overfitting.

AirSlide - Gesture Controlled Presentation System - Allow users to control presentation slides using hand gestures through a camera. It works on real-time video input and uses a YOLO-based hand detection model to understand gestures for moving slides forward or backward, entering full-screen mode, and exiting full-screen mode. The system is built for smooth and fast response and removes the need for a keyboard or mouse during presentations.

Image Classification - Performed image classification on MNIST-Hand written digits data using neural networks (MLP and LeNet-5) and compared their classification performance.

CSIRO - Image2Biomass Prediction - Participated in Kaggle competition which involved predicting multiple pasture biomass values using vegetation images and related metadata. I worked on a ResNet-based deep learning model in PyTorch, combined image features with tabular data, and trained it using cross-validation. Image augmentations and test-time augmentation were used to improve model stability and prediction accuracy.

SKILLS

Libraries and Frameworks: Python, PyTorch, TensorFlow, Scikit-learn, OpenCV, YOLO, NumPy, Pandas, SciPy, Matplotlib, Albumentations, K-Fold Cross Validation, Playwright, Selenium, BeautifulSoup

ACHIEVEMENTS

DEANS LIST OF HONORS (Fall 2024, 2025, Spring 2026) - Included in Deans list of honors for outstanding academic performance scoring SGPA over 3.5 each semester
